SUMMARY

Master's student specializing in Agentic AI Engineering with practical expertise in designing, building and deploying multi-agent workflows, retrieval-augmented generation (RAG) pipelines, and intelligent automation tools. Skilled in building robust backend services and agentic applications utilizing Python, FastAPI, LangGraph, LangChain, LangSmith, vector databases, and Leading LLM APIs. Adept at rapid prototyping via AI-assisted toolsets, driven by iterative user feedback to deliver impactful workflow automation solutions.

TECHNICAL SKILLS

Languages & Concepts: Python, SQL, OOPs, DSA

Agent Harness: LLM Integration, LangGraph, LangChain, Tool Calling, Chatbots, Multi-Agent Systems, Prompt Engineering, Observability, LLM Evals, MCP, STT-TTS

AI Concepts: Agentic Harness, RAG Systems, Machine Learning, Data Science, NLP

Frameworks & Tools: FastAPI, Streamlit, React (basic), REST APIs, Pydantic

Libraries: Pandas, NumPy, SpaCy, NLTK, Scikit-Learn, HuggingFace Transformers, FastMCP

Databases: PostgreSQL, MySQL, Qdrant, FAISS, ChromaDB, Pinecone, Redis

DevOps & LLMOps: Docker, Render, Vercel, Streamlit Cloud, LangSmith, HuggingFace Spaces, AWS (Console Basics)

Tools: Git, GitHub, Postman, Google Colab, VS Code, Antigravity, n8n

PROJECTS

OpsPilot — Autonomous RevOps AI Agent Platform | *Demo* | *GitHub*

- **Tech Stack:** Python, FastAPI, LangGraph, LangChain, Google Gemini, React (Vite + Tailwind CSS), ChromaDB, SQLAlchemy, LangSmith, Slack SDK, Notion API, Salesforce API, SSE.
- Architected a ReAct agent in LangGraph with Gemini function calling, dynamically selecting across 4 tools (Notion RAG, Salesforce lookup, CRM task creation, entity extraction).
- Built an event-driven platform with Slack Socket Mode, FastAPI backend, a React dashboard with live SSE updates, and LangSmith observability for full pipeline tracing
- Designed a Human-in-the-Loop approval workflow letting operators review and edit AI-drafted responses before Slack publication.
- Validated performance with a 3-tier eval suite: 94% triage accuracy, 90% RAG top-3 hit rate, 4.2/5.0 reply quality (LLM-as-judge).

NoteFlow — Autonomous Voice-to-Notion Capture Agent | *GitHub*

- **Tech Stack:** Python, FastAPI, LangGraph, Google Gemini, Notion MCP, Groq Whisper, edge-tts, LangSmith
- Engineered a Voice-Driven Notion Agent: Developed an autonomous assistant using FastAPI, LangGraph, and Google Gemini connected to Notion MCP, transcribing voice via Groq Whisper and delivering spoken confirmations via edge-tts.
- Cut capture latency by over 70% by pairing an in-memory workspace cache with prompt-tuned single-turn creation for new notes, while maintaining full multi-turn ReAct loops for exploratory multi-step page updates.
- Built LangGraph duplicate-tool interception and recursion circuit breakers to stop infinite search loops, implemented English-locked, zero-temperature STT to reduce hallucinations, and used LangSmith to trace agent trajectories, tool calls, and token usage.

GitHub MCP Server — Extensible Model Context Protocol Server | *Live Endpoint* | *GitHub*

- **Tech Stack:** Python, FastMCP, Model Context Protocol (MCP), GitHub REST API, Pydantic, Uvicorn, JSONRPC, Render.
- Built and deployed a production-ready MCP server in Python using FastMCP, laying the foundation for an upcoming autonomous AI PR review agent.
- Implemented 7 specialized PR tools covering metadata extraction, unified diffs, changed-file listings, and line-level inline code reviews.
- Designed tools to accept repo identifiers and auth tokens as runtime parameters, letting any AI agent inspect public or private repos without server-side reconfiguration.
- Built with a modular, extensible architecture and resilient error handling, deployed via Streamable HTTP on Render.

RAGVerse AI — End-to-End RAG Framework | *GitHub*

- **Tech Stack:** Python, LangChain, LangGraph, Google Gemini, ChromaDB, PostgreSQL, RAGAS, LangSmith.
- Designed a modular RAG system using LangGraph and LangChain, enabling multi-turn conversations with persistent memory.
- Built a ChromaDB retrieval pipeline with hybrid retrieval, reranking, and configurable chunking, backed by PostgreSQL checkpointing for resumable sessions.
- Integrated Gemini for response generation and built a RAGAS-based eval pipeline measuring faithfulness, relevancy, and context precision.
- Structured the system as a state-based workflow with LangSmith observability, Supporting multi-agent use cases.

EDUCATION

Master of Computer Applications (MCA) — **Pursuing** — 2025 – 2027 (Expected)

Gujarat Vidyapith, Ahmedabad, Gujarat

Bachelor of Computer Applications (BCA) — 2022 – 2025

Smt. B.K. Mehta IT Centre BCA College Palanpur, Palanpur, Gujarat

ACHIEVEMENTS & CERTIFICATIONS | View Certificates

PG State & University-Level Programming Competitions

- **1st Place** — Python Programming Competition | Tech-Fest | Sardar Patel University, Vallabh Vidyanagar, Gujarat
- **Winner** — Code Seige (Python) | Tech Kaushalya | Dept. of Computer Science, Gujarat University, Ahmedabad, Gujarat
- **Runner-up** — Logic Forge (Python) | Tech Kaushalya | Dept. of Computer Science, Gujarat University, Ahmedabad, Gujarat
- **1st Place** — Code Combat (Java) | IGNITE CMPICA | CHARUSAT, Changa, Gujarat

Hackathons

- **Participant** — n8n Community Hackathon | Faculty of Computer Science and Applications (FCA), CMPICA, CHARUSAT, Changa, Gujarat
- **Participant** — SSIP Regional Hackathon, New India Vibrant Hackathon | Ganpat University, Kherva, Mehsana

Certifications

- AWS Training & Certification — Introduction to Generative AI: Art of the Possible (Completion Certificate, Online)
